

At August Schell, we understand that achieving CMMC compliance can be complex, especially for small and mid-sized businesses navigating federal cybersecurity requirements. Our goal is to simplify this process by offering tailored, cost-effective solutions to help organizations within the Defense Industrial Base (DIB) meet CMMC Level 2 and beyond. Below is a summary of the services we provide to support your compliance journey.

GAP ANALYSIS: Identifying CMMC Readiness Gaps

Comprehensive evaluation of existing systems, cybersecurity practices and policies.

Identification of gaps relative to CMMC Level 2 requirements.

OUTCOME:

A structured remediation roadmap helping organizations prioritize & prepare for certification assessment.

Deliver a detailed report outlining gaps and providing a roadmap for remediation.

Development of Information Flow Diagrams, mapping FCI & CUI systems.

Creation of Scoping Asset Inventory

Secure Enclave Architecture & Network Remediation

Organizations handling Federal Contract Information (FCI) and Controlled Unclassified Information (CUI) often benefit from establishing a dedicated secure enclave designed to meet federal cybersecurity requirements.

Our RPO advisory team supports the design and implementation of enclave architectures aligned with NIST SP 800-171 security requirements

Secure enclave architecture design/remediation planning

Network segmentation and boundary protection strategies

DoW and NIST cybersecurity standards implementation guidance

OUTCOME:

A secure and well-structured environment designed to support compliance with federal cybersecurity requirements and readiness for CMMC certification.

Documentation Development: Audit-Ready Compliance Documentation Services

Our offered services include developing a System Security Plan (SSP) tailored to your organization, as well as drafting essential policies, procedures, and control evidence, ensuring alignment with CMMC requirements. In addition to the SSP, key compliance documents include:

- Incident Response Policy
- Access Control Policy
- Identification & Authentication Policy
- Physical Protection Policy
- Media Sanitization Procedures
- Data Management Policy
- Network Security Policy
- System & Information Integrity Policy

OUTCOME:

A complete documentation package aligned with CMMC expectations and ready for review during certification assessments.

Self-Assessment & SPRS Preparation

Before pursuing certification, organizations must understand their cybersecurity posture and accurately evaluate compliance with federal safeguarding requirements.

Services Offered:

Develop CMMC Level 2 self-assessment documentation.

Validation of assessment evidence and scoring.

Assistance preparing submission to the Supplier Performance Risk System (SPRS)

OUTCOME:

An accurate and defensible self-assessment baseline that supports future certification readiness.

Assessment Readiness & Mock Assessments

Preparing for a certification assessment requires organizations to validate their policies, evidence, and operational practices before engaging a C3PAO.

Our readiness services simulate the certification assessment experience to help organizations identify and resolve issues before formal evaluation.

Services Offered:

Pre-assessment readiness review with documentation and evidence validation

Mock CMMC Level 2 Assessment with assessor style interview preparation

Post-assessment guidance to resolve findings or required remediations.

OUTCOME:

Organizations gain confidence and operational readiness prior to undergoing a formal CMMC certification assessment conducted by an independent C3PAO.

Pricing

Our pricing is tailored to each organization's size, environment complexity, and compliance needs. We work closely with clients to provide cost-effective solutions while delivering practical cybersecurity improvements.
