Splunk Public Sector Services Partner of the Year

Cribl North America Professional Services Partner of the Year

Our team of engineers can address a multitude of IT challenges many CIOs face today while keeping security and compliance at the forefront of every mission. We implement sophisticated technology that can enable your organization, we optimize existing resources, and we avoid the “rip-and-replace” mentality.

- Built DoD PKI infrastructure supporting 4 million users; delivered mobile derived credential system used by entire department.
- Developed IC enterprise SIEM and automation solution in response to growing threats using NIST standards and industry best practices.

### ASSESSMENT

Proven leader in maximizing IT systems for your business needs. With a team of highly-trained, cleared, and certified engineers, our assessment services are designed to help your team analyze your existing environment and generate actionable insights to bring IT and business goals into alignment.

### CONSULTATION

Ensure IT systems should be in total alignment with organizational goals. Engaging professional services for the installation, configuration, management, and ongoing upkeep of your technology products allows your organization to focus on doing what it does best and let us deal with IT infrastructure management.

### DESIGN & DEPLOY

Custom solutions to optimize your current environment. Knowing that CIOs and their teams are tasked to do more with less, the goal is to design and implement a solution that maximizes efficiency, increases uptime, aids in departmental collaboration, and lowers total operation costs.

### SERVICES

In house engineering services help you achieve mission objectives and keep your environment up and running. No matter how short or long an engagement is, we work diligently for our customers until they are completely satisfied that our solutions will solve their challenges in new and innovative ways.

## WHY AUGUST SCHELL?
